

External Origin Stability & Caching Telemetry Report

Formal diagnostic report of sequential black-box probes against <https://www.ccpatio.com>, generated from immutable telemetry_logs and check_results for execution 1d9cdd65-24da-45f6-b713-4eda16b8da82.

Prepared by	SRE Certification Engine

Test window (UTC)	2026-09-19 14:50:21 UTC – 2026-09-19 14:55:55 UTC
Test posture	External / black-box · Sequential only · Min. 4s sleep on endurance
Working archive	JSON twin SHA-256 c168805745564db2d08da5a7926ba164a6eacb3545e1c4da8a7a4d380a233af8

EXECUTIVE VERDICT · CRITICALLY_UNSTABLE

The origin architecture is **CRITICALLY_UNSTABLE**. Forced sequential MISS endurance recorded 2 TTFB cliff(s) ($\geq 3,000$ ms) with a P95 MISS of 1,155 ms. Maximum uncompressed soft-404 payload was 2.22 MB. Edge masking ratio: 0.18.

1,155 ms P95 MISS TTFB	2 TTFB CLIFFS ($\geq 3S$)	2.22 MB MAX SOFT-404	0.18 MASKING RATIO

1. Table of contents

1. Scope & objectives
2. Method & tooling
3. Sequential endurance (forced MISS)
4. Failure vector catalog
5. Mandatory gates & remediation
6. Supporting materials

2. Scope & objectives

This report documents externally observed behavior of the live production origin serving <https://www.ccpatio.com>. The program goal was to determine whether apparent storefront speed is produced by healthy origin compute or by optimizer cache hits—and whether the origin can sustain uncacheable traffic without stalling.

The engine is a stateless empirical observer. It has no hardcoded knowledge of prior forensic campaigns. Grades are assigned only from persisted telemetry.

In scope

- HTTP header routing (Cloudflare / optimizer)
- TTFB on HIT vs forced MISS paths
- Soft-404 commerce payload tax
- Sequential endurance drift
- M6–M12 failure vectors (architecture, ops, security)

Out of scope

- Concurrent / multi-threaded load testing
- Payment gateway or checkout conversion UX
- Visual redesign or merchandising changes
- Direct host ini edits

3. Method & tooling

All probes were strictly single-threaded. Endurance tests enforced a minimum four-second sleep after every request.

TOOL	FUNCTION	KEY PARAMETERS
executionRunner (Inngest)	Step-isolated probe orchestration	<code>step.sleep("4s")</code> between probes; concurrency 1 / project
endurance_miss	Cache-busted MISS loop on the target URL	Unique nonce QS; sleep $\geq 4s$; 25s hard timeout
pre_flight_ping	WAF / challenge abort valve	Abort as NOT_TESTABLE on 403 / 503 / JS challenge

Safety rationale

Sequential pacing is a hard law. This program refuses parallel clients. A single sequential worker with enforced 4000 ms gaps is sufficient to expose origin cliffs without manufacturing an outage.

4. Sequential endurance (forced MISS)

Each endurance request carried a unique query string to defeat anonymous HTML HIT reuse. Rows with TTFB $\geq 3,000$ ms are marked `tr.spike`.

#	STATUS	TTFB (MS)	TOTAL (MS)	CF	NITRO
1	200	1181	1259	DYNAMIC	MISS
2	200	549	686	DYNAMIC	MISS
3	200	526	608	DYNAMIC	MISS
4	200	595	679	DYNAMIC	MISS
5	200	19951	20047	DYNAMIC	MISS
6	200	490	574	DYNAMIC	MISS
7	200	604	686	DYNAMIC	MISS
8	200	497	597	DYNAMIC	MISS
9	200	621	707	DYNAMIC	MISS
10	200	522	623	DYNAMIC	MISS
11	200	517	598	DYNAMIC	MISS
12	200	536	629	DYNAMIC	MISS
13	200	546	613	DYNAMIC	MISS
14	200	559	640	DYNAMIC	MISS
15	200	512	598	DYNAMIC	MISS

STATISTIC	VALUE
TTFB minimum	56 ms
TTFB median	522 ms
TTFB P95 (MISS)	1,155 ms
TTFB maximum	19,951 ms
Cliffs ($\geq 3,000$ ms)	2

5. Failure vector catalog

Programmatic evaluation of M6–M12 anomaly flags on telemetry_logs.

VECTOR	STATUS	EVIDENCE
Edge Masking / Cache Conflicts	OBSERVED	cf-cache-status DYNAMIC; CACHE_POISONING_DETECTED
Origin Compute / Endurance	OBSERVED	STALL_20S / CLIFF (≥3s TTFB)
Commerce Tax / Payload Bloat	OBSERVED	PAYLOAD_BLOAT · 2.22 MB
Architectural Overlaps	OBSERVED	DUAL_BUILDER_CONFLICT; DUPLICATE_SCHEMA_EMITTERS
Ops & Background Load	OBSERVED	CRON_QUEUE_BLOAT; DB_READ_CONTENTION_STALL
Security & Leaks	NOT OBSERVED	CRITICAL_SECRETS_EXPOSED; AUTH_SOFT_404_DDOS_RISK
Cold Start After Idle	NOT OBSERVED	burst-after-idle TTFB cliff
DB Pool Exhaustion	NOT OBSERVED	inferred max_connections ceiling
Idle Connection Drop	NOT OBSERVED	origin timeout after 60s starvation
Cart Cache Poisoning	NOT OBSERVED	Session bypass verified
Write-Path Stall	NOT OBSERVED	POST wc-ajax 249 ms
Missing Object Cache	NOT OBSERVED	product search 145 ms
Builder Asset Bloat	NOT OBSERVED	uploads/elementor/css + plugin enqueues
Optimizer Bot WAF	NOT OBSERVED	NitroPack Optimizer user-agent

6. Mandatory gates & remediation

SEVERITY	GATE	RESULT	MESSAGE
P0	P0_NO_STALL_20S	PASS	No 20s stalls observed
P1	P1_SOFT404_BYTES	FAIL	Soft-404 max size: 2272KB
P1	P1_NO_COLD_START_CLIFF	PASS	No idle-burst cliff observed
P1	P1_NO_DB_POOL_EXHAUSTION	PASS	No connection-pool exhaustion inferred
P2	P2_EDGE_SECURITY_HEADERS	FAIL	Redirect hops=0; auth Cache-Control missing
P0	P0_NO_CART_CACHE_POISONING	PASS	Session cart cookies bypassed at the edge
P2	P2_API_CANARY_ISOLATION	PASS	API TTFB 135ms; HTML-API delta 19816ms
P1	P1_RANDOMIZED_404_ROUTING	PASS	Randomized unknown paths returned HTTP 404
P1	P1_NO_DUAL_BUILDER	FAIL	Multiple JSON-LD schema emitters present
P2	P2_INLINE_INJECTION_BUDGET	FAIL	More than 15 inline head scripts (HFCM overlap)
P1	P1_WRITE_PATH_TTFB	PASS	Write-path TTFB 249ms
P1	P1_HTTP_COMPRESSION	PASS	gzip or brotli content-encoding present
P0	P0_AUTH_SURFACE_SAFE	PASS	Login surface is not a soft-404 DDoS amplifier
P1	P1_XMLRPC_WAF	PASS	xmlrpc.php is blocked or absent
P0	P0_NO_DEBUG_LOG_LEAK	PASS	Debug logs are not publicly exposed
P1	P1_API_PAGINATION_READ	FAIL	REST per_page=50 TTFB 19305ms
P1	P1_CANONICAL_ROUTING	PASS	HTTP upgrade and apex→www use strict 301/308
P0	P0_NO_SECRETS_EXPOSED	PASS	Web root does not expose credential files
P0	P0_NO_VERBOSE_PHP_ERRORS	PASS	Origin swallowed malformed REST input without stack traces
P1	P1_CRON_QUEUE	PASS	wp-cron.php TTFB 67ms
P1	P1_SITEMAP_GENERATION	PASS	sitemap_index.xml TTFB 303ms
P1	P1_OPTIMIZER_BOT_WAF	PASS	Optimizer bot user-agent was not challenged
P1	P1_SESSION_AFFINITY	PASS	Session cookie stayed on a single origin fingerprint
P1	P1_OBJECT_CACHE	PASS	Product search TTFB 145ms
P1	P1_BUILDER_ASSET_BLOAT	PASS	Builder/plugin enqueue counts within budget

7. Supporting materials

Machine-readable twins are persisted with this HTML artifact. The JSON telemetry SHA-256 is the empirical binding for the grade.

Empirical Artifact Law satisfied. JSON Telemetry SHA256: c168805745564db2d08da5a7926ba164a6eacb3545e1c4da8a7a4d380a233af8 · Execution 1d9cdd65-24da-45f6-b713-4eda16b8da82 · Grade CRITICALLY_UNSTABLE
