Powder coat, per METAL.md	~1.2 lb	~1.2 lb
Dekton top	75.3 lb	125.4 lb
Assembled	131 lb	181 lb

Steel CALCULATED — wall 0.065", density 0.2836 lb/in³, sharp corners, so 2–3% over mill tables. Dekton at 2.5 g/cm³. The top alone outweighs the frame, 2.3× at 2.0 cm.

Dekton colour and thickness are not in the part number. Both are resolved per order at slab planning — stock is carried as <COLOUR> 1.2 and 2.0 in separate bins. The 1" top shown here is nominal.

NOTES

- Every dimension measured from the SketchUp model by ccp_extract.rb. Component names were not read.
- Stated lengths are LONG POINT. A 45° mitre on 2×2 moves the length 2.00 per angled end.
- Steel 16 ga throughout — ruled 2026-09-10. Gauge is not visible in geometry.
- Stretcher qty 4 is a ruling — the model carries 3 placed and must be corrected.
- Weights are calculated, not weighed. No weight data exists in the item catalogue.
- Stretcher positions shown are the four corners of the base perimeter, inferred from the part lengths (38 + 2 + 2 = 42). Confirm against the model before fabrication.
