

FRONT ELEVATION scale 1:9

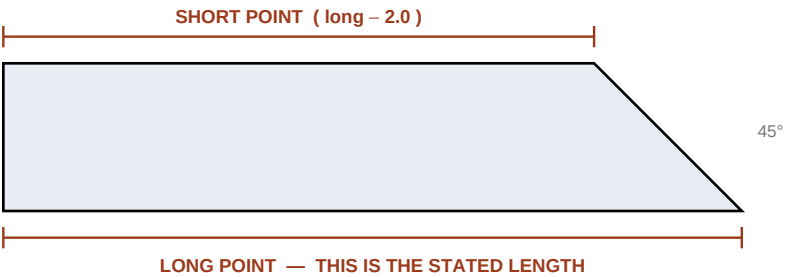

SIDE ELEVATION scale 1:9 · left side shown, right side identical

PLAN — SEAT FRAME ASM-BRV-SEAT-034x034 · scale 1:9 · cushion + back removed

DETAIL A — WHICH LENGTH IS THE PART NUMBER? scale 1:2.6

A 45° mitre on 2" tube moves the length 2.0" per angled end.
PART_NUMBERING.md §3 fixes the LONG POINT as the stated length.

(!) THE MODEL DOES NOT YET FOLLOW ONE CONVENTION

SEAT FRAME	34"	reads LONG	— makes a 34 x 34 square
BACK TOP	30"	reads SHORT	— 34 - 2 - 2 = 30
ARM TOP	32"	reads SHORT	— 34 - 2 = 32
BACK POST	19"	reads SHORT	— 10 + 19 + 2 = 31 OA

Cut BACK TOP at 30" long point and the back finishes 30" wide against a 34" chair. VERIFY BEFORE ANY PART IS RENUMBERED.

NOTES

- SAMPLE / VISUALISATION. Elevations are SCHEMATIC — built from the stated part lengths in the SketchUp component list, not from the model geometry. Not a released drawing.
- QUANTITIES ARE INFERRED FROM A SCREENSHOT of the model. Slat and cross-brace counts especially. Verify with SketchUp File > Generate Report.
- Two dimension chains DO close against PRODUCT_CATALOG.csv: deck 10.0 + arm post 14.0 = arm height 24.0 · deck 10.0 + back post 19.0 + top rail 2.0 = 31.0 overall.
- ITEM 4 WIDTH IS ASSUMED. Model states "FLAT BAR HR FLAT 1/8"" — thickness only. 1-1/2" taken from MET-034, the only 1/8" flat bar stocked. Confirm.
- All welds ground smooth for a visible powder-coat finish. See SDS_REGISTER.md before handling powder.

BILL OF MATERIALS — METAL
